

Anti-Fraud Privacy Policy Amendment (DRAFT)

Privacy Policy — Anti-Fraud & Trust Integrity Amendment (DRAFT)

Prepared: 2026-07-08 · **Status:** DRAFT for DPO (Indalecio Sacdalan Casasola II) + external PH counsel review — **publish only after sign-off.**

How to use this document. The section below — from “## Amendment 2026-07-08 — Anti-Fraud & Trust Integrity” down to the end of B.6 — is written to **drop straight into** the Setnayan Privacy & Security Policy, immediately after the 2026-07-05 Person-Graph amendment. Copy from that heading down. This closes the disclosure gap identified in the anti-fraud DPIA R-08 §6 — the processing is already live (shipped 2026-07-07), so this is the transparency limb catching up. Built to RA 10173 by design; **not a substitute for legal review.**

Amendment 2026-07-08 — Anti-Fraud & Trust Integrity

Added 2026-07-08 to disclose how we protect the integrity of our marketplace signals (reviews, ratings, badges, booking counts) against manipulation. **Status:** **DRAFT pending DPO (Indalecio Sacdalan Casasola II) + PH counsel review** — published only after sign-off. This processing is already active; this amendment brings the public disclosure into line with it. Assessment: DPIA R-08 + RoPA DPS-12. Built to RA 10173 by design; this amendment does not replace counsel confirmation.

B.1 What we do, and why

To keep our reviews, ratings, badges, and “most-booked / top-pick” signals **honest**, we run automated integrity checks that detect and prevent manipulation — for example, fake or duplicate accounts created to inflate a vendor’s reputation, or coordinated fake bookings.

- **Detecting duplicate identities.** To spot rings of accounts controlled by one person or household, we analyse signals we **already hold**: your **device fingerprint**, your **normalised home address**, and the **payment-sender identity** on your transactions.

Accounts that share these strong signals are grouped so that duplicate reviews and bookings are **counted once, not many times**.

- **Scoring risk.** We compute per-vendor **fraud-risk signals** (for example, unusual review timing, isolated single-vendor accounts, or all-5-star patterns) and combine them into a risk score.
- **Acting on it.** At a high-confidence score, a vendor's public listing may be **temporarily hidden (suspended)** while we review.

B.2 Lawful basis

We rely on **legitimate interest** ([RA 10173 § 12\(f\)](#)) — preventing fraud and protecting the integrity of the marketplace for couples and for honest vendors. We use **only data already collected for other purposes** (there is no new collection for this), applied to this compatible and now-disclosed purpose.

B.3 Automated decisions — and your right to contest them

- **Automatic suspension is reversible.** When the risk score is high, a vendor's listing may be automatically hidden and its badges frozen. **No data is deleted**, and a single review by our team reverses it.
- **Permanent action is never automatic.** Removing a vendor's reviews/events from our statistics and permanently banning an account requires **two separate members of our team to confirm** — it is a human, logged decision, never made by the system alone.
- **You can object and appeal.** If you are a vendor affected by an automated suspension or an enforcement action, you may **object and request a review** through our [Help Center](#) or by contacting our Data Protection Officer at iscasasolaii@gmail.com. This reflects your rights under RA 10173 § 16(c) (right to object) and § 34 (rights relating to automated processing). We acknowledge and respond within the timelines in § 9 of this Policy.

B.4 What we do not do

- We **do not capture or use your IP address** for this.
- These fraud groupings, signals, and scores are **strictly internal** — no couple or vendor can view them. They are **never sold, shared with third parties, used for advertising, or used to rank or promote vendors**. They are used **only** for fraud prevention and marketplace integrity.
- The evidence we store is **non-identifying** — counts, ratios, and internal labels, **not** your name, address, or raw identifiers.

B.5 Who this affects

- **Couples and guests** — your device, address, and payment-sender signals may be used to detect duplicate-identity rings. You are never shown any grouping, and no automated decision is made *about you* from this.
- **Vendors** — your public trust statistics are de-duplicated, and you may be risk-scored and (reversibly) suspended, with the human-reviewed objection and appeal path described in B.3.

B.6 Retention

Duplicate-identity groupings are **recomputed on an ongoing basis** and are not kept as a standing history. Fraud-risk signals and enforcement records are kept **only as long as necessary** for fraud prevention and to handle any related dispute or appeal, after which they are deleted or de-identified, consistent with the retention principles in § 4 of this Policy.

Contact. For any question about this processing, or to object or appeal, contact our Data Protection Officer, Indalecio Sacdalan Casasola II, at iscasasolaii@gmail.com, or use the [Help Center](#). You may also lodge a complaint with the [National Privacy Commission](#).

*This DRAFT is prepared to a compliant RA 10173 baseline ahead of counsel. It is **not a substitute for legal review** and is **not yet published**. Finalize with the DPO (Indalecio Sacdalan Casasola II) + external PH counsel, then append the “Amendment 2026-07-08” section to the live Privacy Policy and set the effectivity date. Open follow-ups it references: the internal fraud-signal retention window (DPIA R-08 · AF-8) and the formal automated-decision contest workflow (§ 16(c)/§ 34).*
